

How to Make a Toy Kite

1. Form a cross from dry reed grass or slender sticks, fastening them together with string.
2. Draw the string from the center to the top of the vertical stick and tie it. Then stretch the string from there to all the other ends.
3. Cover everything with light paper and tape it on as shown.
4. Make small holes and draw strong but thin pulling cord above and on both sides of the crossbars. Don't forget the ears and tail of your kite, which will hold it in balance when the wind carries it high.
5. To make the tail of the kite, tie ribbons (tied) about every 4 inches down the string of the kite. Tie one ribbon on each ear of the kite (look at number 4 above).
